## **Finally, A Secure iPhone Personal Health Record for Your Family**

**– CSI announces MotionPHR for the iPhone –**

PORTLAND, Ore.--(BUSINESS WIRE)--Communication Software, Inc. (CSI), based in Portland, Oregon is proud to announce an application for the Apple iPhone, MotionPHR. It is a secure and encrypted *Personal Health Record (PHR)* for the iPhone. CSI released iPhone application MotionPHR in April 2009 and it is available for purchase on iTunes. MotionPHR provides a secure environment for the consumer to store and organize their individual or family's Medications, Immunizations, Current Problems, Test Results, and Allergy information. All data is secured utilizing RSA encryption and password protection.

### **Leading Differentiators of MotionPHR:**

- Health Information “lives” on the iPhone
- Health Information is Secure
- 5 Star Rating from Customer Reviews
- Aligned with the ONC
- Secure Off the iPhone Data Backups

MotionPHR is a *PHR* in alignment with the ONC with regards to *PHR* benefits, content, security, interoperability, standards, and accessibility. An important note about accessibility is that many regions without Internet or Cell coverage are within 10 miles of urban neighborhoods; MotionPHR does not need a cell/Internet connection to access the potentially life saving information stored on it. In addition, MotionPHR provides an ICE (In Case of Emergency) feature that provides “First Responder” data such as contact and medical information that is available without a password.

CSI assists the consumer to take charge of their wellness by providing MotionPHR to track their family's health information and help follow doctors' instructions. Some popular uses of MotionPHR by our customers include travel, medication reminders, chronic illness monitoring and school registration.

CSI believes that their MotionPHR product is well positioned in the iPhone medical application market to be extremely successful and at this week's Apple iPhone WorldWide Developers Conference reports are that doctors are “flocking to iPhone apps.”

CSI's next release of motionPHR will include a lite version at a reduced price to give the consumer the opportunity to see the quality of the MotionPHR application. The MotionPHR personal health record, *PHR*, application retail price is \$19.95, introductory price is \$9.99.
